

Butterfly Garden

Woodland Primary School District 50

Gages Lake, Illinois

Goals: The goal of our Butterfly Garden is for the students to learn the life cycle of plants, seeds, and butterflies through a hands-on learning experience.

Who's Involved: 725 kindergarten and early childhood students from Woodland Primary School

How the Project Works:

The Primary Butterfly Garden is an annual yearlong project in which early childhood and Kindergarten students participate. This project integrates math, science, language arts, and social studies through various hands on activities. The students actively participate in the planting of seeds in the classroom and flowers in the garden, as well as a hands-on experience with the butterfly life cycle. This project is an integral part of our school's year-long plan because the students learn the importance of seeds and plants not only on the life cycle of a butterfly but also in the environment.

Results: The result of our unit is to have a beautiful garden for our butterflies to live in.
